SUMMARY

Software engineer with 4+ years of experience who uses AI daily as a force multiplier, not a crutch. I build mobile apps and web platforms using React Native, TypeScript, and Node.js, and I integrate AI tools deeply into my workflow: Claude AI with MCP connections for design handoff and test automation, AI coding agents for accelerating development, and OpenAI APIs in production features. What sets me apart is knowing where AI ends and engineering judgment begins. AI cannot catch the subtle UI inconsistency that breaks trust, the edge case that only shows up on a specific device, or the architectural decision that shapes how a codebase scales. My product managers and teammates recognize me for exactly this: a strong eye for detail and a product sense that ensures what ships is not just functional but genuinely good. Currently developing a React Native app for a fintech platform serving millions of users across 100+ countries.

TECHNICAL SKILLS

AI-Augmented Development: Claude AI (daily), MCP Integrations (Figma MCP, Playwright MCP), AI Coding Agents, OpenAI API Integration, LangChain (learning), LangGraph (learning)

Frontend & Mobile: React Native, Expo, React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Framer Motion, Figma

Backend & APIs: Node.js, NestJS, REST APIs, GraphQL, tRPC, Prisma, Supabase, PostgreSQL

Quality & DevOps: Jest, Playwright, GitHub Actions, CI/CD Pipelines, EAS Build, Docker, AWS, Agile/Scrum

PROFESSIONAL EXPERIENCE

Mobile Software Engineer

LaunchGood • August 2025 – Present • Remote, United States

- Rebuilt key screens, tabs, and components for the React Native app redesign, using AI coding agents to accelerate development while applying deep product judgment on UI quality, edge cases, and platform-specific behavior that AI consistently misses
- Recognized by product managers for strong attention to detail that goes beyond what AI tools can catch, consistently identifying usability issues, visual inconsistencies, and interaction problems before they reach users
- Integrated AI-assisted workflows into daily development using Claude with MCP connections (Figma MCP for design handoff, Playwright MCP for test automation), multiplying output without sacrificing quality
- Migrated legacy views to modern UI architecture, making judgment calls on component structure and design consistency that require human understanding of the full product context
- Implemented new features end-to-end with backend/API integrations, writing Jest component tests to maintain stability as the team ships fast
- Refactored older codebases, removing unused logic and improving file structure, using AI to identify patterns while personally validating every change against real app behavior
- Debugged platform-specific build issues (CocoaPods, Gradle, Xcode) across iOS and Android using EAS Build, the kind of environment-specific troubleshooting where AI suggestions often fail and hands-on experience matters

QA Automation Engineer

LaunchGood • February 2025 – August 2025 • Remote, United States

- Built comprehensive Playwright automation suite from scratch, including reusable components, helpers, and clean environment setup
- Implemented GitHub Actions CI/CD pipelines with cron-scheduled synthetic tests running every 5 minutes across environment matrix
- Integrated Slack webhook notifications for instant failure alerts, significantly improving incident response time
- Reduced test flakiness through ESLint rules, best practices implementation, and improved project structure
- Created API and UI synthetic tests monitoring Golden Flow and critical campaign creation journeys

Freelance Full-Stack Mobile Engineer

Self-Employed • August 2024 – February 2025 • Remote

- Developed and launched mobile application integrated with OpenAI API, delivering AI-driven features for enhanced user interaction
- Built full-stack web platform using Next.js, Supabase, tRPC, and Prisma with real-time data handling architecture
- Created e-commerce website using Next.js and Shopify Headless Storefront API with custom store configuration
- Led end-to-end app submission processes for App Store and Google Play, ensuring compliance and smooth deployment

Full-Stack Mobile Engineer

Aurem • December 2022 – August 2024 • Abu Dhabi, UAE

- Migrated website front-end from Chakra UI to Tailwind CSS, reducing styling time by 30% and enhancing consistency
- Automated Expo build process using GitHub Actions, enabling CI/CD on main branch commits and saving 7 hours of manual effort weekly
- Designed and implemented backend APIs with NestJS including models, entities, mutations, and queries with Jest testing
- Led end-to-end feature development: backend API creation, frontend integration, and unit testing before QA handoff

Frontend Engineer

HCL Technologies • January 2022 – December 2022 • Warsaw, Poland

- Developed Micro-Frontends using Single-SPA for 'My Account' section, supporting modularity for 2+ million users
- Initiated and led peer knowledge-sharing sessions, fostering collaboration and improving team expertise
- Created comprehensive documentation for environment setup, simplifying onboarding for large-scale project

Full-Stack Engineer Intern

proceedit • July 2021 – January 2022 • Barcelona, Spain

- Migrated company WordPress website to AWS, enhancing scalability and reliability
- Developed and maintained Flutter-based website, enhancing cross-platform functionality and user experience

EDUCATION

Bachelor of Engineering, Computer Engineering • Vistula University • 2019 – 2022 • Warsaw, Poland

Coursework: Software Engineering, Algorithms, Mobile Technologies, Database Systems, Object-Oriented Programming

CERTIFICATIONS

AgilePM® Foundation • ReactJS • Flutter Puzzle Hack

LANGUAGES

English (Fluent) • Kyrgyz (Native) • Turkish (Fluent) • Russian (Fluent) • Polish (Professional)
