SUMMARY

Software engineer, 5 years with TypeScript across web, mobile and automation. At a crowdfunding platform used in 100+ countries I moved from QA automation to the mobile app to the web, where I now automate the processes behind it. I tend to own the parts next to the feature: test suites and monitoring, release pipelines, workflow automation. Comfortable across frontend (React, Next.js), backend (Node/NestJS) and CI, and I use AI coding tools heavily enough that work which used to take weeks lands in days.

EXPERIENCE

Software Engineer — LaunchGood — Jul 2026 – Present · Remote, US

- Automated a manual, multi-department approval process end to end: one n8n workflow connects the website to payment, CRM and task-management tools. Turnaround went from days to minutes.
- Building analytics views on the campaign creator side that give fundraisers a clear picture of their results.

Mobile Software Engineer — LaunchGood — Aug 2025 – Jul 2026 · Remote, US

- Rebuilt core screens of a React Native app serving 100+ countries as part of an app-wide facelift, shipping each feature end to end across API integration, state, UI and Jest component tests.
- Brought Claude into the team's workflow via MCP for design handoff and test authoring.

QA Automation Engineer — LaunchGood — Feb 2025 – Aug 2025 · Remote, US

- Built the company's first Playwright end-to-end suite from scratch, with reusable page-object helpers other engineers extended.
- Put it on a five-minute GitHub Actions cron as synthetic monitoring, with Slack webhook alerts on failure.
- Brought detection of production breakages down from hours to under five minutes.

Full-Stack Mobile Engineer — Freelance — Aug 2024 – Feb 2025 · Remote

- Developed a mobile app integrated with the OpenAI API for AI-driven user features.
- Built a full-stack web platform with Next.js, Supabase, tRPC and Prisma, and an e-commerce site on the Shopify Headless Storefront API.

Full-Stack Mobile Engineer — Aurem — Dec 2022 – Aug 2024 · Abu Dhabi, UAE

- Migrated the frontend from Chakra UI to Tailwind CSS, cutting styling time by 30% and standardizing the component layer.
- Automated Expo builds with GitHub Actions, saving 7 hours of manual release effort weekly.
- Designed and implemented NestJS backend APIs (data models, entities and queries) behind the app's core flows.

Frontend Engineer — HCL Technologies — Jan 2022 – Dec 2022 · Warsaw, Poland

- Built micro-frontends with Single-SPA for the "My Account" area of a platform serving 2M+ users, working inside a shared shell across multiple teams; started a recurring peer knowledge-sharing session for the frontend team.

Full-Stack Engineer Intern — proceedit — Jul 2021 – Jan 2022 · Barcelona, Spain

- Migrated the company site from WordPress to AWS and built a Flutter web front end for cross-platform reach.

PROJECTS

Nidham (نظام) — agentic mobile planner for Muslims with ADHD — 2026

- Built the MVP end to end in 48 hours: a React Native + Expo (TypeScript) client with Supabase auth and sync, and an n8n backend routing each plain-language brain-dump through three agents (capture, Tavily-backed research, and a scheduler that works around the five daily prayer times).
- Kept the planning logic in the workflow, so agent changes ship without an app release. Case study: try.ka.nz/ai/aminatmoldalieva

AI Interview Coach — real-time avatar interviewer (prototype) — 2026

- Prototyped a voice-driven mock interviewer: configured an ElevenLabs conversational agent and wired it to a HeyGen LiveAvatar over LiveKit, so the agent's audio drives a lip-synced video interviewer that answers in real time.

SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, Tailwind CSS, Single-SPA

Backend: Node.js, NestJS, tRPC, Prisma, Supabase, REST APIs, SQL

Automation: n8n workflows, webhooks, third-party API integrations (payments, CRM, task management)

AI & Agents: LLM APIs (Claude, OpenAI), Model Context Protocol (MCP), multi-agent routing, system prompt design, ElevenLabs conversational agents, HeyGen LiveAvatar / LiveKit, AI coding agents (Claude Code)

Mobile: React Native, Expo, Flutter

Testing & CI: Playwright, Jest, GitHub Actions, synthetic monitoring, AWS

EDUCATION

B.Eng., Computer Engineering — Vistula University, Warsaw, Poland

Languages: English, Russian, Kyrgyz, Turkish, Polish
